

Cancer Diagnosis Report

IC Number: 921104106556

Age: 33

Cancer Type: Skin

Cancer Stage: 4

Created At: 5/31/2025, 1:51:44 PM

Diagnosis

Type: Malignant, Stage: Stage 4, Probability: 98.86%

Survival Prediction

Survival Years: 7.41, Severity Score: 4.42

Recommended Treatment

1. Targeted Therapy - Targets specific genetic mutations like BRAF (Duration: 16 week(s))
Medications: BRAF Inhibitor - e.g., Vemurafenib for BRAF-mutant melanoma
Follow-up: Routine PET/CT scans every 3 months to monitor response
2. Palliative Care - Focuses on relief from symptoms and stress (Duration: 20 week(s))
Medications: Pain relievers, anti-nausea drugs, and mood stabilizers if needed
Follow-up: Weekly visits for symptom management and emotional support
